Call us to schedule a Lunch & Learn TODAY!

## PRE-HYDRO ACTIVITIES:

- Coordination with Client QA/QC Personnel
- Test Package Assembly
- Pre-Hydro Punch List Development
- Client Test Procedure Review
- Hydrotest Plan Development

## EXECUTION ACTIVITIES:

- Blinding & Isolating
- Provide all Hydrotest Equipment
- Furnish all Experienced Hydro Technicians
- Management & Execution of Hydro Plan

## POST-HYDRO ACTIVITIES:

- Dewater/Dry-Out System
- Blind Removal and Restore System
- System Completion Evaluation & Sign-Off
- Release System to Client for Startup & Commissioning

## Conventional Hydrotesting Service

From spool and module testing to hydrotesting entire units and plants, CARBER® has the personnel and equipment required to execute total conventional hydrotesting projects. CARBER® has a vast inventory of hydrotesting equipment in stock and ready to mobilize to your next job site, including filters, dryers, pumps, dead-weight and chart recorders, hot water systems, water recycling systems, pressure safety valves, slip blinds, conventional blinds, bolts, hydro gaskets and tank trailers that fill 12 lines at one time.

## PLAIN-END OR OPEN-END HYDROTESTING SERVICE (a compliment to conventional hydrotesting)

Test open-ended pipe spools or modules without the need to weld caps and then cut them off & re-bevel pipe. This patented technology can save 2/3 the time and 2/3 the cost of using caps.
